VUE ESSENTIALS CHEAT SHEET

<a :href="url">...

<button @click="addToCart">...

Stop all event propagation

EXPRESSIONS

```
<div id="app">
  I have a {{ product }}
  {{ product + 's' }}
  {{ isWorking ? 'YES' : 'NO' }}
  {{ product.getSalePrice() }}
</div>
```

DIRECTIVES

Element inserted/removed based on truthiness:

```
{{ product }}
```

```
...
...
```

Toggles the display: none CSS property:

```
...
```

Two-way data binding:

```
<input v-model="firstName" >
```

```
v-model.lazy="..." Syncs input after change event

v-model.number="..." Always returns a number

v-model.trim="..." Strips whitespace
```

LIST RENDERING

```
    {{ item }}

    key always recommended
```

To access the position in the array:

```
...
```

To iterate through objects:

```
...
```

Using v-for with a component:

BINDING

shorthand

```
<a v-bind:href="url">...</a>
```

True or false will add or remove attribute:

```
<button :disabled="isButtonDisabled">...
```

If isActive is truthy, the class 'active' will appear:

```
<div :class="{ active: isActive }">...
```

Style color set to value of activeColor:

```
<div :style="{ color: activeColor }">
```

ACTIONS / EVENTS

Calls addToCart method on component:

<button v-on:click="addToCart">...

Arguments can be passed:

shorthand

```
<button @click="addToCart(product)">...
```

To prevent default behavior (e.g. page reload):

```
<form @submit.prevent="addProduct">...
```

Only trigger once:

.stop

.self

```
<img @mouseover.once="showImage">...
```

Only trigger if event.target is element itself

Keyboard entry example:

```
<input @keyup.enter="submit">
```

Call onCopy when control-c is pressed:

```
<input @keyup.ctrl.c="onCopy">
```

Key modifiers:

.tab	. up	.ctrl	
.delete	. down	.alt	
.esc	.left	.shift	
.space	.right	.meta	

Mouse modifiers:

.left	.right	.middle	

VUE ESSENTIALS CHEAT SHEET

COMPONENT ANATOMY

```
Vue.component('my-component', {
  components: { Components that can be used in the template
   ProductComponent, ReviewComponent
  props: { >> The parameters the component accepts
    message: String,
    product: Object,
    email: {
      type: String,
      required: true,
      default: 'none'
     validator: function (value) {
       Should return true if value is valid
  data: function() { Must be a function
   return {
     firstName: 'Vue',
      lastName: 'Mastery'
```

Return cached values until

fullName: function () { dependencies change
 return this.firstName + ' ' + this.lastName

watch: { Called when firstName changes value

firstName: function (value, oldValue) { ... }

Can also use backlicks for multi-line

},

},

},

computed: {

CUSTOM EVENTS

methods: { ... },

Use props (above) to pass data into child components, custom events to pass data to parent elements.

template: '{{ message }}',

Set listener on component, within its parent:

```
<button-counter v-on:incrementBy="incWithVal">
```

Inside parent component:

```
methods: {
  incWithVal: function (toAdd) { ... }
}
```

Inside button-counter template:

Custom event name this. Semit('incrementBy', 5) Data sent up to parent

LIFECYCLE HOOKS

beforeCreate beforeUpdate created updated beforeMount beforeDestroy destroyed

USING A SINGLE SLOT

Component template:

Use of component with data for slot:

```
<my-component>
  This will go in the slot
</my-component>
```

MULTIPLE SLOTS

Component template:

```
<div class="container">
    <header>
        <slot name="header"></slot>
        </header>
        <main>
              <slot>Default content</slot>
        </main>
        <footer>
                   <slot name="footer"></slot>
        </footer>
                   <footer>
                   </footer>
                   </footer>
                   </div>
```

Use of component with data for slot:

```
<app-layout>
<template v-slot:header><h1>Title</h1></template>
The main content.
<template v-slot:footer>Footer</template>
</app-layout>
```
